

CHAPTER MEETINGS

INDIANA CHAPTER INDIANAPOLIS, DEC. 4, 1972

On Monday, December 4, 1972, the Indiana Chapter of Associated Public-Safety Communication Officers, (APCO) held its final meeting for 1972. As has been the custom for many years, the meeting place was the Indianapolis Fraternal Order of Police hall.

The host was Captain *Frank Campbell* and the City of Indianapolis. The traditional Indiana home-style fried chicken dinner with all the trimmings, including one of *Frank's* favorite cigars, was served to all 49 souls present.

Special guests were introduced and they included: Indianapolis Fire Chief, *David Russell*; Deputy Chief *Lee Fulmer*; Marion County Sheriff *Lee Eads*; past Secretary-Treasurer and National Sergeant of Arms *Richard Jones*; and honorary life member *Jake Spade*.

Mr. *Wally McKim*, Communications Specialist for the Indiana Criminal Justice Planning Agency, presented a talk entitled, "Concepts for ILEEN System," (Indiana Law Enforcement Emergency Network).

Mr. *Robert Stanton*, Indiana State Police Communications Engineer, then followed with a talk on the "ALECS System," (Automated Law Enforcement Communications System).

Both of these systems will be implemented in Indiana within the very near future according to *McKim* and *Stanton*.

The final committee reports for 1972 were given by the individual chairmen, and the Secretary presented a wrap-up report on the Chapter's activities for the year.

Frank Campbell, Chairman of the nominating committee, read the slate of the selected candidates for 1973, and then conducted the annual election. The new officers for 1973 will be: President—*Oscar Sykes*, First Vice—*Ray McNelly*, Second Vice—*Jack Burlison*, and Secretary/Treasurer—*Wade Kingery*. The Directors are: *J. T. Bordeaux*, *Neal Hollingsworth*, *William Jump*, and *Robert Hogue*.

President *Schnippel* charged the new officers with their responsibilities during a swearing in ceremony.

Having no old business, the presiding gavel was turned over to the new President who in turn presented a gavel plaque to out-going President *Schnippel*.

As a matter of new business, a motion was made and passed by a majority vote

RE: CE-7, A LOW-PRICED FM RADIO MONITOR
MADE ESPECIALLY FOR YOU

Here's something you should know about for testing your own mobile and point to point FM radios.

The CE-7 gives you all the convenience that commercial shops have, for up to 23 crystal-controlled frequencies between 20 and 1150 MHz. You buy only the frequencies you need, pay over 33 percent less than you would for a tunable instrument.

Most importantly, you get all the features that have made the CE-7's famous tunable companion -- the CE-3 -- the standard in most two-way service shops:

- Carrier frequency measurements with $\pm 0.0001\%$ accuracy: just dial up your channel
- FM deviation measurements with either a plug-in meter or a plug-in oscilloscope that displays modulation characteristics
- Choice of plug-in preselectors for off-the-air monitoring of base stations up to 50 miles away
- Built-in speaker
- Generation of calibrated CW or FM test signals at the crystal frequencies. Use internal 1 kHz modulating frequency or any external VF signal.
- Generation of up to 10 crystal-controlled IF frequencies
- Field proven reliability and serviceability
