

operable with touchpen or finger and is mouse-compatible for use with any Windows software. The on-screen keyboard interchanges with a lighted, detached keyboard, available with the purchase of Data911 MX Software. The color screen is bright enough for direct sunlight visibility and can be dimmed for nighttime viewing. It offers excellent wide-angle visibility for both driver and passenger.

The unit interfaces with all wireless radio networks and has easy MDT upgrade and replacement programs. The software offers on-screen "touch buttons" for the most frequently used message types and data compression for optimal channel use. Data911 services include software customization, dispatch integration and message switching.

Available options include GPS, a voice-to-text feature, a magnetic-strip and bar-code reader, a video/adaptor board for multimedia capture and transfer, a ruggedized printer and a laptop/personal digital assistant interface for out-of-car applications.

Positron's IAP is a Plus

The Positron Intelligent Answering Position Plus Workstation™ represents a technological evolution in PSAP console design. Engineered specifically for the E9-1-1 environment, it combines a wide range of advanced features with simplified use and maximum dependability.

The IAP Plus Workstation offers advanced calltaking features and can perform local and remote voice and data transfers, eliminating the need for additional display and telephone equipment. All you need is a single amphenol cable to connect the workstation to backroom equipment for up to 210 lines, making system installation and expandability simple and easy.

Palladium Shows Off its CAD

Palladium, a registered trademark of Lucent Technologies, Inc., offers its CAD. It blends automated resource dispatching support for the processing of E9-1-1 calls and includes data management for all public safety forces, community services and data distribution. Designed for novice and seasoned users alike, Palladium CAD improves data accuracy, promotes consistency and enhances management of daily operations. It features user-friendly call-taking and dispatch screens, command line flexibility, instantaneous alerts, on-line databases and user-definable codes and terminology.

When a call comes in, any ANI/ALI information is immediately displayed, including response information and alerts for hazardous conditions, outstanding warrants, preplans, images and medical infor-

mation. If an operator needs more details on any of these alerts, it's only a "hot key" or mouse-click away.

Palladium CAD is Y2K compliant and suitable for single-agency and multiple-department/jurisdictional dispatching. Its screens and data fields are customizable and have interfaces available for E9-1-1, TDD and medical dispatching. Palladium CAD has on-line "real time" mapping integration and a GEO-file creation option. It alerts you to duplicate calls, hazardous conditions, previous call history, evacuation plans and complaint-type instructions. It makes unit suggestions and assignments and includes independent times and reporting. The system also has on-line faxing and printing of incident information for emergency response or incident reporting, an on-line audit trail, emergency listings of names, telephone and fax numbers, as well as tow and alarm information. It integrates with Palladium Records Management System for reporting and queries.

Palladium CAD, based on the Windows NT operating system, brings true point-and-click, multi-jurisdictional dispatching to PSAPs of all sizes.

Moducom Improves Analog Phone Integration

Modular Communications Systems Inc., introduces a low-cost solution for analog telephone line integration.

Features include availability of each phone line at all operator positions, analog loop or ground start lines, caller ID, conferencing, radio patch, flash, hold, redial, supervisory release, unlimited speed-dial buttons and 10 phone book speed-dials of 1000 numbers each.

To add telephone capability to any Ultra-Com NT console system, simply add a Telephone Card Cage to your existing Ultra-Com NT MEP II switch to provide 16 telephone card slots. Then insert one Quad Phone Line Card for each four telephone lines required. Finally, update the Ultra-Com system software to the latest version.

As always, Modular Communication Systems software updates are free of charge and available on floppy or CD or via their Web site (www.moducom.com).

Datalux Gives More Power to the Brick

Specialist computing and related hardware vendor Datalux has upgraded its Databrick computer, effecting a 45 percent increase in processing power. The upgrade is designed for hostile and space-restricted computing environments. Datalux will now ship the
